

Katyayini Paper Mills Installed Drum Pulper

Key Benefits of the AEAB Solution:

SCADA system for easy operation and fault finding

100% control on their machine

Zero Dependency on foreign suppliers

The Customer, and their current solution

Katyayini Paper Mill, located in Kashipur, is a manufacturer of writing, printing and craft paper. They bought a new drum pulper from a supplier in China and are using an automation solution from Siemens with Siemens AC Drives.

Customer's Problem and Pain Points

Katyayini purchased the whole system and installed it only to realize that it does not have any documentation or program to run the system. Their foreign supplier did not give them any backup for the PLC. They only had a list of PID's and some basic knowledge of process. Unfortunately, their whole investment was going in vain as they did not know how to commission the pulper.

AEAB Solution, and its impact to the customer

Team AEAB visited them and studied the process and documents provided by their foreign supplier. We consulted with them several times on the process to streamline the working of pulper. We took up the job of commissioning their drum pulper within a predefined time:

Customer got the below benefits:

- All the backups created by AEAB now are in hand of customer
- Additional SCADA system provided for operation and fault monitoring made their life easier.
- Dependency on foreign supplier has been removed
